The European Standard EN 736-1:1995 has the status of a
British Standard

Committees responsible for this British Standard

The preparation of this British Standard was entrusted to Technical Committee PSE/7, Valves, upon which the following bodies were represented:

Amalgamated Engineering Union
 Association of Bronze and Brass Founders
 British Chemical Engineering Contractors' Association
 British Foundry Association
 British Gas plc
 British Plumbing Fittings Manufacturers' Association
 British Valve and Actuator Manufacturers' Association
 British Water
 Chartered Institution of Building Services Engineers
 Electricity Association
 Energy Industries Council
 Engineering Equipment and Materials Users' Association
 GAMBICA (BEAMA Ltd)
 Health and Safety Executive
 Institution of Mechanical Engineers
 LP Gas Association
 Ministry of Defence
 Pipe Line Industries Guild
 Society of British Water Industries
 Water Services Association of England and Wales
 West Midlands CBI
 Coopted members

This British Standard, having been prepared under the direction of the Engineering Sector Board, was published under the authority of the Standards Board and comes into effect on 15 July 1995

© BSI 07-1999

National foreword

This British Standard has been prepared by Technical Committee PSE/7 and is the English language version of EN 736-1:1995 *Values — Terminology — Part 1: Definition of types of values*, published by the European Committee for Standardization (CEN).

EN 736-1 was produced as a result of international discussions in which the United Kingdom took an active part.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, the EN title page, pages 2 to 7 and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

ICS 01.040.20; 23.060.00

Valves — Terminology Part 1: Definition of types of valves

Appareils de robinetterie — Terminologie —
Partie 1: Définition des types d'appareil

Armaturen — Terminologie —
Teil 1: Definition der Grundbauarten

This European Standard was approved by CEN on 1995-02-01. CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

European Committee for Standardization
Comité Européen de Normalisation
Europäisches Komitee für Normung

Central Secretariat: rue de Stassart 36, B-1050 Brussels

Foreword

This European Standard has been prepared by the Technical Committee CEN/TC 69, Industrial valves, the secretariat of which is held by AFNOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by August 1995, and conflicting national standards shall be withdrawn at the latest by August 1995.

According to the CEN/CENELEC Internal Regulations, the following countries are bound to implement this European Standard: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, United Kingdom.

1 Scope

This standard gives the denominations of valves. It has the purpose to provide a uniform and systematic terminology for all types of valves. By reasons of classification of terms, clause 4 defines terms related to basic design characteristics and clause 5 defines terms related to functional characteristics of valves.

2 Normative reference

This European Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies.

EN 736-2, *Valves — Terminology — Part 2: Definition of components of valves.*

3 Definition

For the purposes of this standard, the following definition applies:

3.1 valve

pipng component which influences the fluid flow by opening, closing or partially obstructing the passage of the fluid flow or by diverting or mixing the fluid flow

4 Types of valves related to design

4.1 Basic types

Table 1 shows the basic types of valves.

They are distinguished by:

- a) the operating motion of the obturator;
- b) the direction of flow in the seating area.

4.1.1 Gate valve

Valve in which the obturator movement is linear and, in the seating area, at right angle to the direction of flow.

4.1.2 Globe valve

Valve in which the obturator movement is linear and, in the seating area, in the direction of flow.

NOTE This definition also applies to lift check valves and axial check valves.

4.1.3 Plug and ball valves

Valve in which the obturator rotates about an axis at right angle to the direction of flow and, in the open position, the flow passes through the obturator.

4.1.4 Butterfly valve and eccentric plug valve

Valve in which the obturator rotates about an axis at right angle to the direction of flow and, in the open position, the flow passes around the obturator.

NOTE This definition also applies to swing check valves.

4.1.5 Diaphragm valve

Valve in which the fluid flow passage through the valve is changed by deformation of a flexible obturator.

NOTE This definition also applies to diaphragm check valves.

4.2 Examples of basic types

The schematic figures given below show typical designs of valves. Details of different body patterns and obturator designs are given in EN 736-2.

4.2.1 Gate valve

Table 1 — Basic types of valves

Operation of the obturator	Linear motion	Rotation about an axis at right angles to the direction of flow	Deformation of a flexible component		
Direction of flow in the seating area	At right angles to the operating motion of the obturator	Through of obturator	Around the obturator		
Schematic figures					
Basic type	Gate valve	Globe valve	Plug and ball valves	Butterfly and eccentric plug valves	Diaphragm valve
<p>  Direction of fluid flow  Operating motion of the obturator </p>					

4.2.2 *Globe valve*

Globe valve

Lift check valve

Axial check valve

4.2.3 *Plug and ball valve*

Plug valve

Ball valve

4.2.4 Butterfly valve and eccentric plug valve

4.2.5 Diaphragm valve

5 Types of valves related to function

5.1 Isolating valve

Valve intended for use only in the closed or fully open position.

5.2 Regulating valve

Valve intended for use in any position between closed and fully open.

5.3 Control valve

A power operated device which changes the fluid flow rate in process control system. It consists of a valve connected to an actuator with or without positioner that is capable of changing the position of an obturator in the valve in response to a signal from the controlling system.

5.4 Safety valve

Valve which automatically, without the assistance of any energy other than that of the fluid concerned, discharges a certified quantity of the fluid so as to prevent a predetermined safe pressure being exceeded, and which is designed to reclose and prevent further flow of fluid after normal pressure conditions of service have been restored.

5.5 Bursting disc safety device

A non-reclosing pressure relief device actuated by differential pressure and designed to function by the bursting of the bursting disc(s). It is the complete assembly of installed components including, where appropriate, the bursting disc holder.

5.6 Check valve

Valve which automatically opens by fluid flow in a defined direction and which automatically closes to prevent fluid flow in the reverse direction.

NOTE Definitions of types of check valves are given in clauses 4.1.2, 4.1.4 and 4.1.5.

5.7 Diverting valve

Valve intended to influence the proportion of two or more output flows from a common input flow by changing the position of the obturator.

5.8 Mixing valve

Valve intended to influence the proportion of two or more input flows to produce a common output flow by changing the position of the obturator.

5.9 Automatic steam trap

Self-contained valve which automatically drains the condensate from a steam-containing enclosure whilst remaining tight to live steam or, if necessary, allowing steam to flow at a predetermined rate.

BSI — British Standards Institution

BSI is the independent national body responsible for preparing British Standards. It presents the UK view on standards in Europe and at the international level. It is incorporated by Royal Charter.

Revisions

British Standards are updated by amendment or revision. Users of British Standards should make sure that they possess the latest amendments or editions.

It is the constant aim of BSI to improve the quality of our products and services. We would be grateful if anyone finding an inaccuracy or ambiguity while using this British Standard would inform the Secretary of the technical committee responsible, the identity of which can be found on the inside front cover.
Tel: 020 8996 9000. Fax: 020 8996 7400.

BSI offers members an individual updating service called PLUS which ensures that subscribers automatically receive the latest editions of standards.

Buying standards

Orders for all BSI, international and foreign standards publications should be addressed to Customer Services. Tel: 020 8996 9001. Fax: 020 8996 7001.

In response to orders for international standards, it is BSI policy to supply the BSI implementation of those that have been published as British Standards, unless otherwise requested.

Information on standards

BSI provides a wide range of information on national, European and international standards through its Library and its Technical Help to Exporters Service. Various BSI electronic information services are also available which give details on all its products and services. Contact the Information Centre.
Tel: 020 8996 7111. Fax: 020 8996 7048.

Subscribing members of BSI are kept up to date with standards developments and receive substantial discounts on the purchase price of standards. For details of these and other benefits contact Membership Administration.
Tel: 020 8996 7002. Fax: 020 8996 7001.

Copyright

Copyright subsists in all BSI publications. BSI also holds the copyright, in the UK, of the publications of the international standardization bodies. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means — electronic, photocopying, recording or otherwise — without prior written permission from BSI.

This does not preclude the free use, in the course of implementing the standard, of necessary details such as symbols, and size, type or grade designations. If these details are to be used for any other purpose than implementation then the prior written permission of BSI must be obtained.

If permission is granted, the terms may include royalty payments or a licensing agreement. Details and advice can be obtained from the Copyright Manager.
